Next Steps

The Problem Statement

For any government projects to be built, it releases tender and then allocates funds to the best bid. The bidder then uses this funds to buy raw materials and other stuff. The process involves multiple middlemen which means that the funds reaching are reduced to minimal...

The project ultimately ends up being much more costlier than intended...

There is no account of the transactions between any parties.

What the industry speaks

Fifty-three percent of respondents say that blockchain technology has become critical priority for their organizations in 2019- a 10-point increase over past years.

-----Deloitte Survey

“We believe executives should no longer ask a single question about blockchain but, rather, a broad set of questions reflecting the role blockchain can play within their organizations.”

— Linda Pawczuk, Deloitte Consulting LLP principal and Deloitte consulting leader for blockchain and cryptocurrency

Survey Stats

01

Views of Organizations

Survey question: Which of the following best describes how you currently view the relevance of blockchain to your organization or project in the coming 24 months?

■ 2019 ■ 2018

It will be critical, in our top five strategic priorities

It will be important but not in the top five strategic priorities

It will be relevant but not a strategic priority

Unsure/we haven't reached a conclusion

It will not be relevant

N=1,386 (2019 global enterprise); N=1,053 (2018 global enterprise)

Note: Some percentages may not total 100 percent due to rounding.

Survey Stats

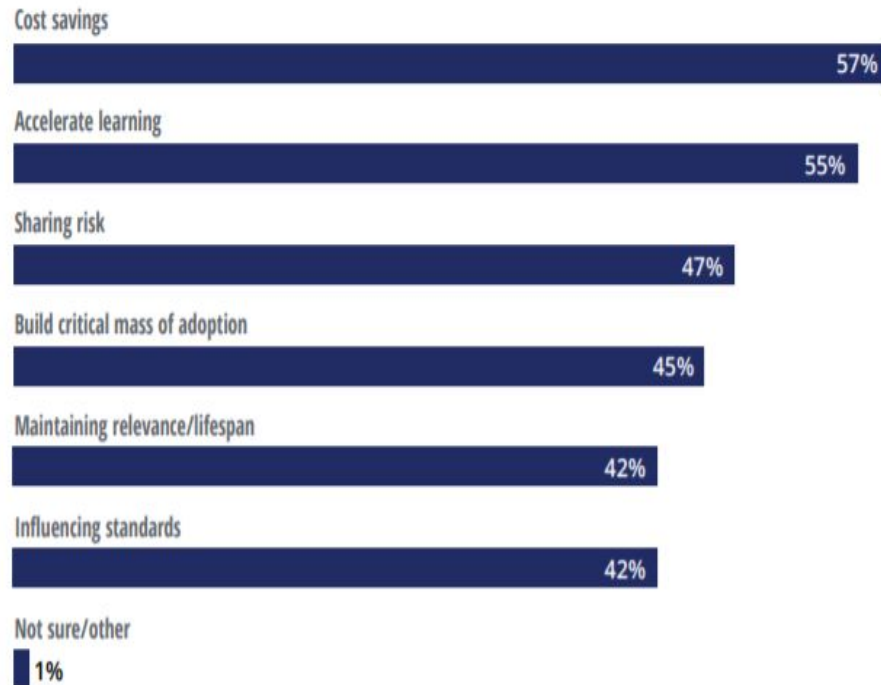

02

Benefits to the organizations

Benefits organizations expect from consortia

Cost savings and learning opportunities are top benefits that respondents expect from consortia participation

Survey question: What benefits does your organization or project get or expect to get from a consortium? (Percentage of respondents who cite that factor as a benefit from joining consortia)

N=1,386 (global enterprise).

Note: Percentages total more than 100 percent because respondents were allowed to submit more than one answer.

Solution Description

FinBloc suggests in creating a seamless payments network built on the Matic using moonpay as our payment service API. We at FinBloc designed a model where the fund allocation happens in blockchain, the usage to buy raw materials happens in blockchain. Each transaction is logged on the ledger which would be available publicly hence increasing transparency.

NO ONE DOES WORK WITHOUT BEING BENEFITED..

So even if the parties involved take commissions it is accounted for!

Business Idea

Using the two most secure techs available today RFID and blockchain we are trying to encrypt the process from each end.

Our Ideology

Each material batch used for the government project would be sealed, verified and details regarding the contents of the batch would be stored in RFID. The detailed database available to the government, the government would get a completely monitored process at hand.
